NOTE: Any documentation used in validating the compliance or existence of each construction or mitigation attribute must accompany this form. At least one photograph must accompany this form to validate each attribute marked in questions 3 though 7. The insurer may ask additional questions regarding the mitigated feature(s) verified on this form.								
	. <u>Building Code:</u> Was the structure built in compliance with the Florida Building Code (FBC 2001 or later) OR for homes located in the HVHZ (Miami-Dade or Broward counties), South Florida Building Code (SFBC-94)?							
	A. Built in compliance with the FBC: Year Built For homes built in 2002/2003 provide a permit application with a date after 3/1/2002: Building Permit Application Date (MM/DD/YYYY)//							
	B. For the HVHZ Only: Built in compliance with the SFBC-94: Year Built For homes built in 1994, 1995, and 1996 provide a permit application with a date after 9/1/1994: Building Permit Application Date (MM/DD/YYYY)//							
\checkmark				— equirements of Ans	swer "A" or "B"			
2. <u>Roof Coverings:</u> Select all roof covering types in use. Provide the permit application date OR FBC/MDC Product Approval number OR Year of Original Installation/Replacement OR indicate that no information was available to verify compliance for each roof covering identified.								
	2.1 Roof Co	overing Type		Permit Application Date		C or MDC et Approval#	Year of Original Installation or Replacement	No Information Provided for Compliance
	1. Asph	alt/Fiberglass Shingle		07/21/2021			2021	
	2. Conc	rete/Clay Tile		//	-			
	3. Meta	ıl		//				
	4. Built	Up		//				
	5. Mem	brane		//	-			
	6. Othe	r		//				
~	A. All roof coverings listed above meet the FBC with a FBC or Miami-Dade Product Approval listing current at time of installation OR have a roofing permit application date on or after 3/1/02 OR the roof is original and built in 2004 or later.							
	B. All roof coverings have a Miami-Dade Product Approval listing current at time of installation OR (for the HVHZ only) a roofing permit application after 9/1/1994 and before 3/1/2002 OR the roof is original and built in 1997 or later.							
	C. One o	r more roof co	verings do r	ot meet the require	ements of Answer	"A" or "B".		
	D. No ro	of coverings m	neet the requ	irements of Answe	r "A" or "B".			
3. <u>Roo</u>	of Deck A	ttachment: W	nat is the <u>we</u>	akest form of roof	deck attachment?			
	A. Plywood/Oriented strand board (OSB) roof sheathing attached to the roof truss/rafter (spaced a maximum of 24" inches o.c.) by staples or 6d nails spaced at 6" along the edge and 12" in the fieldOR- Batten decking supporting wood shakes or wood shinglesOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that has an equivalent mean uplift less than that required for Options B or C below.							
	B. Plywood/OSB roof sheathing with a minimum thickness of 7/16" inch attached to the roof truss/rafter (spaced a maximum of 24" inches o.c.) by 8d common nails spaced a maximum of 12" inches in the fieldOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that is shown to have an equivalent or greater resistance 8d nails spaced a maximum of 12 inches in the field or has a mean uplift resistance of at least 103 psf.							
✓	C. Plywood/OSB roof sheathing with a minimum thickness of 7/16"inch attached to the roof truss/rafter (spaced a maximum of 24"inches o.c.) by 8d common nails spaced a maximum of 6" inches in the fieldOR- Dimensional lumber/Tongue & Groove decking with a minimum of 2 nails per board (or 1 nail per board if each board is equal to or less than 6 inches in width)OR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter

			at is shown to have an equivalent or greater resistance than 8d common nails spaced a maximum of 6 inches or has a mean uplift resistance of at least 182 psf.	es				
			ced Concrete Roof Deck.					
		E. Other:	ccu Concicte Roof Deck.					
			n or unidentified.					
		G. No attic	access.					
4.			o Wall Attachment: What is the <u>WEAKEST</u> roof to wall connection? (Do not include attachment of hip/valley 5 feet of the inside or outside corner of the roof in determination of WEAKEST type)					
		A. Toe Nai	ls					
			Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attach the top plate of the wall, or	ied to				
			Metal connectors that do not meet the minimal conditions or requirements of B, C, or D					
	Mi	inimal cond	litions to qualify for categories B, C, or D. All visible metal connectors are:					
		~	Secured to truss/rafter with a minimum of three (3) nails, and					
		✓	Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a 1/2" gas from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible seve corrosion.					
	~	B. Clips						
		~	Metal connectors that do not wrap over the top of the truss/rafter, or					
			Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet nail position requirements of C or D, but is secured with a minimum of 3 nails.	the				
		C. Single V	Vraps					
			Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.	1 a				
		D. Double	Wraps					
			Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or					
			Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the w both sides, and is secured to the top plate with a minimum of three nails on each side.	vall on				
		E. Structur	al Anchor bolts structurally connected or reinforced concrete roof.					
		F. Other	<u> </u>					
			vn or unidentified					
		H. No attic						
5.	wal	of Geometry l of the host	<u>y:</u> What is the roof shape? (Do not consider roofs of porches or carports that are attached only to the fascia structure over unenclosed space in the determination of roof perimeter or roof area for roof geometry	or				
	€ Clas	ssification). A. Hip Ro	of Hip roof with no other roof shares are then 100/ of the tetal are forest and the					
	_	-	Total length of non-hip features: 0 feet; Total roof system perimeter: 168 feet					
	Ш	B. Flat Ro	Roof on a building with 5 or more units where at least 90% of the main roof area has a roof slope of less than 2:12. Roof area with slope less than 2:12sq ft; Total roof areasq ft					
		C. Other R	Any roof that does not qualify as either (A) or (B) above.					
6.	Sec	<u>ondary Wa</u>	ter Resistance (SWR): (standard underlayments or hot-mopped felts do not qualify as an SWR)					
		to the s	also called Sealed Roof Deck) Self-adhering polymer modified-bitumen roofing underlayment applied directly sheathing or foam adhesive SWR barrier (not foamed-on insulation) applied as a supplemental means to prong from water intrusion in the event of roof covering loss.					
	~	C. Unkno	wn or undetermined.

^{*}This verification form is valid for up to five (5) years provided no material changes have been made to the structure or inaccuracies found on the form.

7. Opening Protection: What is the weakest form of wind borne debris protection installed on the structure? First, use the table to determine the weakest form of protection for each category of opening. **Second**, (a) check one answer below (A, B, C, N, or X) based upon the lowest protection level for ALL Glazed openings and (b) check the protection level for all Non-Glazed openings (.1, .2, or .3) as applicable. Non-Glazed **Glazed Openings Opening Protection Level Chart Openings** Place an "X" in each row to identify all forms of protection in use for each Windows opening type. Check only one answer below (A thru X), based on the weakest Entry Garage Glass Garage Skylights or Entry form of protection (lowest row) for any of the Glazed openings and indicate the Block Doors Doors Doors Doors weakest form of protection (lowest row) for Non-Glazed openings. Not Applicable- there are no openings of this type on the structure Χ Χ Χ Χ A Verified cyclic pressure & large missile (9-lb for windows doors/4.5 lb for skylights) В Verified cyclic pressure & large missile (4-8 lb for windows doors/2 lb for skylights) C Verified plywood/OSB meeting Table 1609.1.2 of the FBC 2007 Verified Non-Glazed Entry or Garage doors indicating compliance with ASTM E 330, D ANSI/DASMA 108, or PA/TAS 202 for wind pressure resistance Χ Opening Protection products that appear to be A or B but are not verified N Other protective coverings that cannot be identified as A, B, or C X No Windborne Debris Protection Χ A. Exterior Openings Cyclic Pressure and 9-lb Large Missile (4.5 lb for skylights only) All Glazed openings are protected at a minimum, with impact resistant coverings or products listed as wind borne debris protection devices in the product approval system of the State of Florida or Miami-Dade County and meet the requirements of one of the following for "Cyclic Pressure and Large Missile Impact" (Level A in the table above). • Miami-Dade County PA 201, 202, and 203 • Florida Building Code Testing Application Standard (TAS) 201, 202, and 203 • American Society for Testing and Materials (ASTM) E 1886 and ASTM E 1996 • Southern Standards Technical Document (SSTD) 12 • For Skylights Only: ASTM E 1886 and ASTM E 1996 For Garage Doors Only: ANSI/DASMA 115 ☐ A.1 All Non-Glazed openings classified as A in the table above, or no Non-Glazed openings exist A.2 One or More Non-Glazed openings classified as Level D in the table above, and no Non-Glazed openings classified as Level B, C, N, or X in the table above A.3 One or More Non-Glazed Openings is classified as Level B, C, N, or X in the table above exist B. Exterior Opening Protection-Cyclic Pressure and 4 to 8-lb Large Missile (2-4.5 lb for skylights only) All Glazed openings are protected, at a minimum, with impact resistant coverings or products listed as windborne debris protection devices in the product approval system of the State of Florida or Miami-Dade County and meet the requirements of one of the following for "Cyclic Pressure and Large Missile Impact" (Level B in the table above): • ASTM E 1886 **and** ASTM E 1996 (Large Missile - 4.5 lb.) • SSTD 12 (Large Missile - 4 lb. to 8 lb.) • For Skylights Only: ASTM E 1886 and ASTM E 1996 (Large Missile - 2 to 4.5 lb.) ☐ B.1 All Non-Glazed openings classified as A or B in the table above, or no Non-Glazed openings exist ☐ B.2 One or More Non-Glazed openings classified as Level D in the table above, and no Non-Glazed openings classified as Level C, N, or X in the table above B.3 One or More Non-Glazed openings is classified as Level C, N, or X in the table above ☐ <u>C. Exterior Opening Protection-Wood Structural Panels meeting FBC 2007</u> All Glazed openings are covered with plywood/OSB meeting the requirements of Table 1609.1.2 of the FBC 2007 (Level C in the table above). ☐ C.1 All Non-Glazed openings classified as A, B, or C in the table above, or no Non-Glazed openings exist ☐ C.2 One or More Non-Glazed openings classified as Level D in the table above, and no Non-Glazed openings classified as Level N or X in the table above ☐ C.3 One or More Non-Glazed openings is classified as Level N or X in the table above RH Property Address Inspectors Initials
